/note="Organ: head_neck; Vector: pucl8; Site_1: Smal; A mini-library was made by cloning products derived from ORESTES PCR (U.S. Letters Patent application No. 196,716 - Ludwig Institute for Cancer Research) profiles into the pUC 18 vector. Reverse transcription of tissue mRNA and cDNA amplification were performed under low stringency conditions.

NCI_CGAP_DF0 is a cDNA library containing the following tissue(s): Subchondral Bone: The library was constructed according to Bonaldo. Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally into pTT73-pac vector. The oligonucleoctide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT) R tall. The man the Not I site and the (dT) R tall. The
